

**Universal Vehicle Holster Mount Adaptor
(Part # GCC-UVHMA)**

INSTALLATION

Before proceeding, DO NOT attempt to place your vehicle mount with a loaded firearm onto the adaptor before adaptor is installed and secure first. Doing so could result in serious injury or death.

The purpose of the enclosed adaptor, is to provide you with a safe alternative of installing your vehicle mount to your steering wheel column. This adaptor allows customers who do not have a gap under their steering column, have an odd design, etc., to still use the vehicle mount as it was intended. This adaptor simply bypasses the steering wheel gap attach point.

Take the enclosed strap and wrap it around your steering wheel column from underneath, and buckle at the top. The buckle should rest on top of your steering wheel column. Be sure adaptor strap does not obstruct ignition or any levers that may be part of the steering column. Once in position, pull adaptor strap to firmly tighten. Finally, there is a metal ring at the bottom of the strap, now under your steering column. Attach the top hook of your vehicle mount to the lower loop of this ring. Pull vehicle mount strap to tighten the entire application. You may need to hold top hook of mount and adaptor ring while pulling vehicle mount tight. This will help insure a tight fit. It is now ready for use.
